Good Reasons for CHECK —

THE FLOORING WITH CHARACTER.

The CHECK vinyl and design floors prove to be a robust and durable option for creating beautiful and healthy living spaces.

A major advantage of CHECK is its high dimensional stability, which enables installation on existing sub-floors, in residential conservatories and by floor-to-ceiling windows. Thanks to harmless plasticizers, our floors also ensure a healthy living environment. Due to the insensitive surface, they are very hard-wearing and easy to clean. With their low construction height of 4.0 mm to 8.0 mm, the CHECK products stand out as optimal renovation floors for every need. The vinyl and design floors can also be installed in bathrooms and kitchens without hesitation, as moisture is guaranteed not to penetrate through the water resistant properties.* The CHECK floors can be installed either by click system or glueing.*

* Product specifications observation

*** CHECK green

**Indication of the level of emissions of volatile substances in the ambient air presenting a toxic risk by inhalation on a scale from A+ (very low emission) to C (high emission).

**Information sur le niveau D'émission de substances volatiles dans l'air intérieur, présentant un risque de toxicité par inhalation sur une échelle de classe allant de A+ (très faibles émissions) à C (fortes émissions).

“If you are looking for a floor with character that is also technically convincing, CHECK is the right choice for you.”
Andreas Koczvara, Managing Director

**15 YEAR
GUARANTEE**
according to guarantee conditions

✓ SUITABLE FOR DAMP ROOMS*

CHECK is a real all-rounder that can also be installed in damp rooms, such as the bathroom.

✓ HEAT RESISTANT*

The floors remain dimensionally stable and can therefore be installed in residential conservatories and by floor-to-ceiling windows.

✓ HARD-WEARING.*

The CHECK surfaces can withstand all residential, commercial and industrial use.

✓ AUTHENTIC

The surfaces not only look like real wood or stone, but they also feel like it. It makes the floor a real eye-catcher.

✓ STABLE

Slight unevenness in the subfloor can be compensated for and telegraphing can be avoided, so that installation is even possible on existing tiles.

✓ HEALTHY LIVING

By dispensing with phthalates, and the use of exclusively harmless plasticizers, CHECK ensures healthy living within your own four walls.

* according to manufacturer's approval / product specifications observation

CHECK – full of character
down to the last detail

For more quality of living

Whether the children are running around the room or the dog is dashing from one corner to the other – our floor has to meet many demands in everyday life. The CHECK vinyl and design floors make a valuable contribution to this, because they can now also reduce walking noise and are even warmer and easier on the joints than conventional floors.

The new collection from CHECK impresses with a built-in insulation underlay that

reduces impact sound by up to 21 dB. The products thus guarantee a very pleasant walking sensation and, in addition, can be laid even faster and more cost-effectively. The clever product design ensures pleasant foot warmth and is gentle on the joints at the same time. Divided into the different collections Basic, Standard and Premium, the products promise a high quality standard that can withstand the greatest stresses.

UP TO 21 DB
IMPACT SOUND
REDUCTION

OTHER STRONG CHARACTER ADVANTAGES

QUIET

The integrated impact sound underlay ensures optimal room acoustics, minimises walking noise by up to 21 dB and thus contributes to a special walking comfort.

FOOT WARMTH

The clever product design of the CHECK-floors ensures a pleasant warmth and makes the floor even more comfortable.

PROTECTS JOINTS

The design of the ABA products (see p. 91) relieves the joints when walking – a blessing for anyone who struggles with joint pain from time to time.

**15 YEAR
GUARANTEE**
according to guarantee conditions

” CHECK combines attractive and natural decors with high quality standards. “
Timo Paulowski, Sales

· suitable for floor-to-ceiling windows and residential conservatories *

· Plasticizer-free carrier board

· suitable for damp rooms *

· hard-wearing

· Selected floors incl. integrated underlay

· suitable for hot water underfloor heating *

THE NEXT GENERATION

Vinyl floors of the CHECK one series have a harder carrier board, which makes the click connections more stable. As a result, they can also be laid in places where conventional vinyl flooring could soften due to heat, for example by floor-to-ceiling windows or in residential conservatories.* It is no longer necessary to acclimatise the material to the room climate before installation.

CHECK one floors are also very hard-wearing and are therefore suitable not only for private use, but also for use in the commercial and industrial sector (e.g. UC 42, Premium Collection).

The click connection makes laying the floor easier and guarantees good surface properties. In addition to the visually accomplished planks, wide planks and tiles of the Basic and Standard Collection, the Premium Collection in particular provides a highlight with its decors, which are available both as wide plank and in Herringbone format.

But CHECK is not only impressive in terms of functionality and design, but also with regard to healthy living. The carrier boards from CHECK one are mineral-based and therefore plasticizer-free. All round health benefits from the clever flooring.

CHECK one | STANDARD COLLECTION TILE

For a long time, tiles in bathrooms and kitchens were the standard. But with vinyl floors, new possibilities arise. In contrast to ceramic tiles, vinyl is not only more cost-effective, but also easier on the joints, warmer on the feet and is suitable for laying on hot water under-

floor heating. The vinyl tiles with an authentic concrete and travertine design as well as a surrounding, real 4V groove, fit perfectly into all living rooms and bedrooms and are also suitable for the kitchen and bathroom.

CHECK one | PREMIUM COLLECTION | HERRINGBONE
INCL. INTEGRATED UNDERLAY

The matt, authentic decors in wide plank format with natural bevel are also available as herringbone with integrated impact sound. The herringbone format, which dates back to 1900, proves to be a timeless classic due to its elegance. Because of the different arrangement of the planks, there are numerous

possibilities to design the room according to your own ideas. Smaller rooms can thus be optically enlarged, depending on the installation pattern. In rooms with plenty of daylight, the herringbone look radiates additional energy and harmony.

CHECK

expert

Some decors of the CHECK one as well as the CHECK comfort series are also available for gluing. The phthalate-free Dryback floors from CHECK expert have the advantage that they are even more hard-wearing and resilient than a floating floor covering due to the full-surface glue-down installation. Thus, it is particularly suitable for heavily frequented or stressed areas. The floors are dimensionally stable and do not move. In the commercial sector, fixed adhesion is sometimes mandatory, and therefore CHECK expert is the perfect choice.

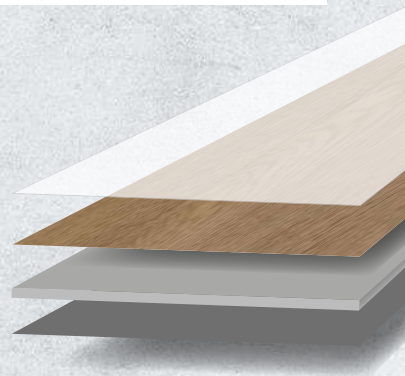

Adhesive bonding is also useful with regard to footfall and walking noise. The covering and the subfloor form a solid unit, which leads to a reduction in walking noise. CHECK expert is also suitable for underfloor heating, as the heat is conducted particularly well from the subfloor to the surface due to the full-surface bond.*

CHECK expert – the long-lasting option from the specialist, lasting enjoyment of a healthy living floor.

comfort
STYLISH
DECORS

STYLISH. EXCLUSIVE. LONG-LASTING.

With **CHECK comfort** you get a floor to feel good, which is as powerful as it is stylish. An all-round exclusive product that delivers what it promises.

The SPC floors from the **CHECK comfort** range can withstand a lot. The hard core on a mineral basis achieves high stability and dimensional stability.

The ABA floors also offer the advantage that the stable SPC carrier board is enclosed by two LVT-layers. The ABA floors thus combine the advantages of a classic vinyl floor with those of an SPC floor – they are extremely robust and at the same time warm underfoot and therefore pleasant to walk on.

In addition, all **CHECK comfort** floors are equipped with an integrated, natural cork impact sound underlay, which reduces the walking noise and thus additionally ensures a soothing sense of space. In order to make the living space not only beautiful and comfortable, but also healthy, all collections have been awarded with the „TÜV PROFICERT product Interior Premium“ trademark and promise the highest quality.

With **CHECK comfort**, you get a floor that offers the same performance and feel-good factor as on the first day, even after years of use.

comfort

Wide plank ABA
incl. integrated cork underlay

The CHECK comfort wide planks are the perfect floor covering for quiet treads who place a lot of value on appearance and high quality. Due to their surface structure, the floors look particularly authentic, since they run synchronously with the wood grain and

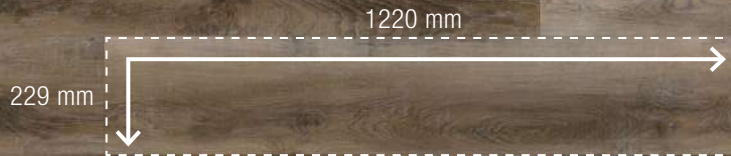

thus create a deceptively real wood look. The product structure ensures increased stability and insensitivity to climatic fluctuations. The already integrated impact sound insulation made of cork gives the floor additional warmth and reduces impact sound.

comfort

Long & wide plank ABA
incl. integrated cork underlay

The ABA wide and long planks impress equally with their comfort as well as their elegant format and decor. The slightly beveled edges ensure a harmonious transition between the planks. The surface structure is both synchronously embossed as well as super matt and is in no way inferior to the real wood floor visually or haptically.

Thanks to the SPC carrier board and the two LVT-layers, the floor achieves the highest level of walking comfort, which also protects the joints. Paired with the integrated cork impact sound underlay, the floor has properties that even a real wood floor can not achieve.

DIMENSIONS: 1522 x 225 mm | **THICKNESS:** 5.5 mm

VINYLFLOORING

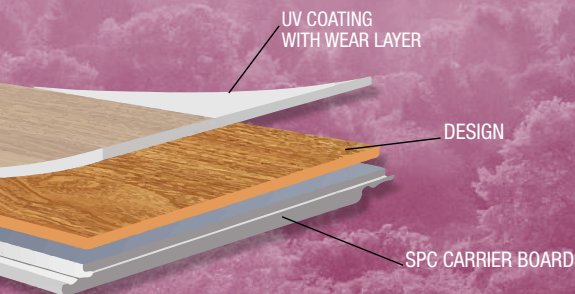

NEW WORLDS IN THE AREA OF HEALTHY LIVING VINYL FLOORS

Welcome to a new World of possibilities with our „World of SPC“ and „World of Dryback“ portfolio, opening up new horizons in the field of vinyl flooring. „World of SPC“ and „World of Dryback“ put the world at your feet. „With love from Germany“, the new portfolio offers a wide range of formats and designs fitted via click system and glued, all supplied with a 10-year guarantee.* The three

clearly defined collections of „Village“, „Town“ and „City“ offer a wide range of possibilities from entry level to heavy usage. Each offers something different within classic, wide and tile formats. Timeless and modern decors with 4V-groove options and the innovation of structured surfaces make the „World of SPC“ and „World of Dryback“ portfolio perfect for all your requirements.

WORLD OF SPC

The „World of SPC“ floors, laid using the click system, have a plasticizer-free mineral base and rigid carrier board, which not only offers superb stability, but is also resistant to heat and moisture. These floors are therefore particularly suitable for residential areas subject to heavy use and can be laid up to floor-to-ceiling windows, in conservatories, bathrooms and kitchens. These SPC Vinyl floors are also ideal for renovation and refurbishment work, such as installation over existing sub-floors due to their rigid backing plate and low installation height.

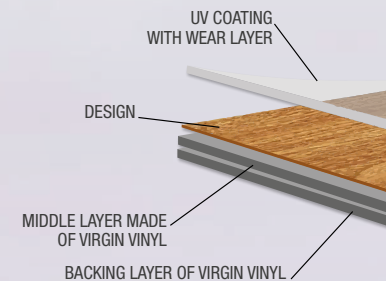

ADVANTAGES „WORLD OF SPC“

- suitable for wet rooms, residential conservatories and floor-to-ceiling windows**
- very hard-wearing
- low construction height
- plasticizer-free carrier board
- increased stability of the click connection
- suitable for underfloor heating*
- easy to clean

WORLD OF DRYBACK

The „World of Dryback“ collection includes water-resistant glued floors, which combine perfectly with hot water under-floor heating systems as the heat is particularly well conducted from the subfloor to the surface thanks to the full surface-wide connection. Due to the strong bond, no additional underlay for impact noise is required to reduce walking noise. In addition, there is nothing to prevent its use up to floor-to-ceiling windows, in residential conservatories, bathrooms and kitchens. Highly resistant and warm, Dryback floors bring such advantages as their low installation height, high load-bearing capacity and long service life as well as being phthalate-free, meaning, you can be safe in the knowledge you are protecting your home and the environment.

ADVANTAGES „WORLD OF DRYBACK“

- suitable for wet rooms, residential conservatories and floor-to-ceiling windows**
- extremely hard-wearing, resilient and durable
- very low construction height
- very easy to clean
- warm to the feet
- noise-free
- phthalate-free
- suitable for underfloor heating*

TOWN COLLECTION

The „Town Collection“ expands the selection and introduces both wide and tile formats in addition to the classic with quick fitting click system. These three formats in an expanded selection of decors open up a myriad of options and possibilities. Thanks to the 4-5 mm thickness, 0.3 mm wear layer and utilisation class 32 this comprehensive portfolio of products can be laid in areas with average residential or commercial use. To add elegance to any area all boards are also supplied with a 4-sided bevel and 4V-groove. Some of the decors are also available as a dryback version for sticking.

1x4 COLLECTION

In the „1x4 Collection“ we present every stunning decor in 4 variations. The portfolio combines both SPC vinyl and Dryback options both in luxurious wide plank and classically appointed Herringbone formats. The SPC vinyl variations in click system installation style are available in 4 mm thickness with a 0.5 mm wear layer and utilisation class 41. The Dryback options offer 2.5 mm thickness with 0.5 mm wear layer and utilisation class 41. The finishing touch is a 4V-groove, which is located both lengthwise and widthwise around each board providing a striking but elegant appearance.

CHECK installation options

LOC-CLICK

With the Loc-Click connection, row by row is clicked into the previous one on the long side. This is done by angling the long side under slight pressure until it clicks into place. The row is then connected to the previous one.

ONE-CLICK

With this click connection, a row is first created over the entire width of the room by clicking together at the front. The next row is clicked into the groove profiling of the previous row on the long edge. To lock, the plank is angled downwards and snapped in with pressure from above until an audible click is heard.

INNOVATION-CLICK

With this click system, each board can be laid individually. The long side is angled, then the panel is lowered and the overlapping end faces are connected by tapping with a rubber hammer, so that the surface is level. The click connection is a particularly stable connection because, contrary to other "drop-down" connections, it is not only inserted or pressed in, but locked in three positions in the tongue and groove and hammered into place.

BONDING

Using this technique, the floor is glued over the entire surface using an adhesive. The individual planks are glued to the walls without tension and without joints. With regard to adhesive processing, the adhesive manufacturer's specifications and instructions must be observed.

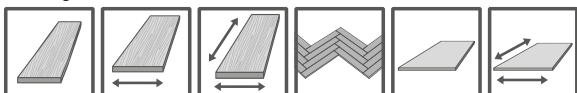

The click connections are ideally suited for floating installation on their own. Detailed installation instructions can be found on the back of each box, at [check-floors.com](https://www.check-floors.com) or as videos on our YouTube channel.

Formats & joint pattern

FORMATS

Our floors are available in different formats, with six variants to choose from: plank, wide plank, long & wide plank, herringbone, tile and XL-tile format.

GROOVES & BEVELLS

4V GROOVE | Grooves frame the individual planks and define the surface appearance of the floor. The lacquered 4V grooves lie both lengthways and transversely around the individual plank, making each plank strikingly visible.

BEVELLED EDGE | A bevel is understood to mean the slight chamfering of an edge. With a 4-sided bevel, each individual plank is slightly accentuated visually.

WITHOUT GROOVES | Planks without grooves show no gaps, resulting in a calm, harmonious appearance.

Special features

INCL. UNDERLAY | The decor is already equipped with impact sound insulation on the underside of the carrier and thus enables quick installation.

MATT | The matt surface gives the decor a natural and real look and makes it appear even more real.

SUPER MATT | The natural-looking super matt surface creates a particularly modern, authentic and exclusive room atmosphere.

HIGH GLOSS | A high gloss surface on vinyl gives the material an elegant, shiny look that makes colours appear more intense and at the same time provides a smooth, easy-to-clean surface.

SYNCHRONPRÄGUNG | Synchronised embossing on vinyl is particularly attractive as it perfectly reproduces the natural wood grain, creating an authentic, high-quality look and a realistic feel.

»EQUIPPED«

For a perfect finish

So that the pleasure of your new floor lasts, it is of great importance to choose the right accessories. The brand **EQUIPPED** offers a wide range of impact sound underlays, skirtings, clip systems and corners.

The impact sound range includes four different insulation underlays for vinyl floors, which are available in thicknesses

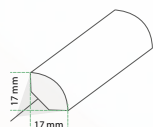

of 1.0 mm and 1.2 mm. There is also a skirting board for every CHECK floor that matches the decor or is white (paintable) and offers the option of concealing a cable behind it. Rounded off by end caps on projections or door frames as well as connectors and inner corners, the range offers everything needed to complete the installation.

All corners, connectors and end caps are available in the following colours:
