DECOR OVERVIEW

check-floors.com

✓ SUITABLE FOR DAMP ROOMS*

CHECK is a real all-rounder that can also be installed in damp rooms, such as the bathroom.

✓ HEAT RESISTANT*

The floors remain dimensionally stable and can therefore be installed in residential conservatories and by floor-to-ceiling windows.

✓ HARD-WEARING*

The CHECK surfaces can withstand all residential, commercial and industrial use.

✓ AUTHENTIC

The surfaces not only look like real wood or stone, but they also feel like it. It makes the floor a real eye-catcher.

✓ STABLE

Slight unevenness in the subfloor can be compensated for and telegraphing can be avoided, so that installation is even possible on existing tiles.

✓ HEALTHY LIVING

By dispensing with phthalates, and the use of exclusively harmless plasticizers, CHECK ensures healthy living within your own four walls.

* according to manufacturer's approval / product specifications observation

Formats & Grooves

FORMATS

Our floors are available in different formats, with six variants to choose from: plank, wide plank, long & wide plank, herringbone, tile and XL-tile format.

FUGENBILD

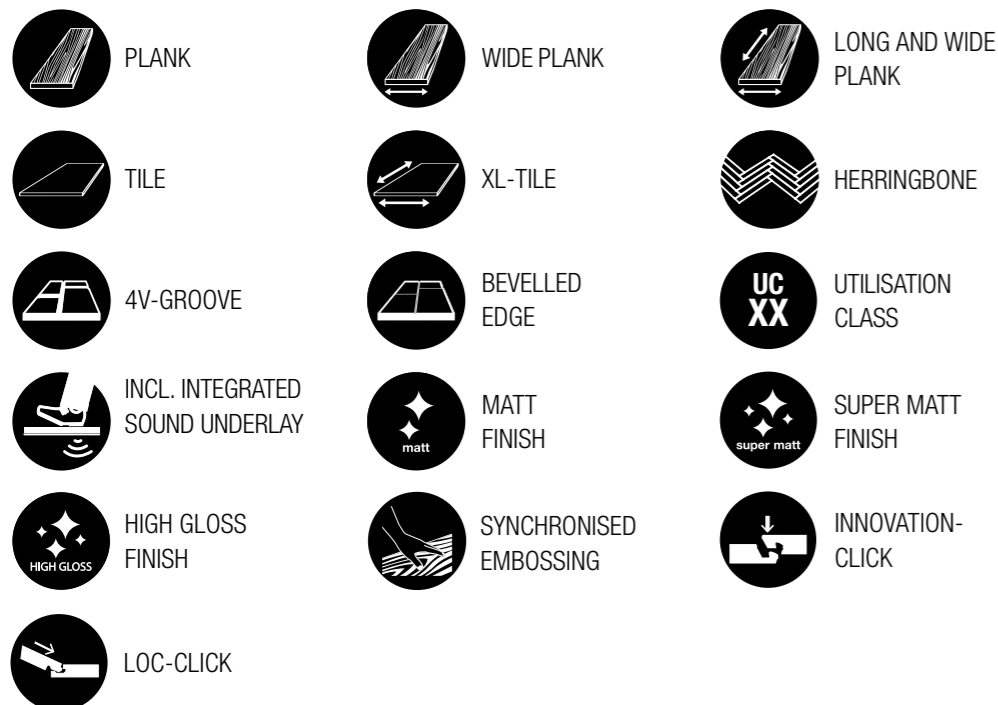

4V GROOVE | Grooves frame the individual planks and define the surface appearance of the floor. The lacquered 4V grooves lie both lengthways and transversely around the individual plank, making each plank strikingly visible.

BEVELLED EDGE | A bevel is understood to mean the slight chamfering of an edge. With a 4-sided bevel, each individual plank is slightly accentuated visually.

WITHOUT GROOVES | Planks without grooves show no gaps, resulting in a calm, harmonious appearance.

PICTOGRAM OVERVIEW

Special features

INCL. INTEGRATED UNDERLAY | The decor is already equipped with impact sound insulation on the underside of the carrier and thus enables quick installation.

MATT | The matt surface gives the decor a natural and real look and makes it appear even more real.

SUPER MATT | The natural-looking super matt surface creates a particularly modern, authentic and exclusive room atmosphere.

HIGH GLOSS | A high gloss surface on vinyl gives the material an elegant, shiny look that makes colours appear more intense and at the same time provides a smooth, easy-to-clean surface.

SYNCHRONISED EMBOSSING | Synchronised embossing on vinyl is particularly attractive as it perfectly reproduces the natural wood grain, creating an authentic, high-quality look and a realistic feel.

CLICKSYSTEMS

LOC-CLICK | With the Loc-Click connection, row by row is clicked into the previous one on the long side. This is done by angling the long side under slight pressure until it clicks into place. The row is then connected to the previous one.

INNOVATION-CLICK | With this click system, each board can be laid individually. The long side is angled, then the panel is lowered and the overlapping end faces are connected by tapping with a rubber hammer, so that the surface is level. The click connection is a particularly stable connection because, contrary to other „drop-down“ connections, it is not only inserted or pressed in, but locked in three positions in the tongue and groove and hammered into place.
